PROFILE

Self-motivated Computer Science undergraduate with almost 1 year of experience in web and app development. Skilled in **JavaScript (ES6+), React.js, Next.js, Node.js, Express.js, and RESTful APIs**, building responsive, user-centric applications. Experienced in **AI model integrations** to enhance functionality and automation. Strong in **client communication**, providing technical suggestions and translating business needs into solutions. Comfortable with **Git** and full frontend-backend workflows, progressing toward a full-stack developer role.

WORK EXPERIENCE

- | | |
|---|-----------------------------|
| Full Stack Developer Intern, DevelopersHub Corporation (Remote) | 01/2026 – 04/2026
Lahore |
| <ul style="list-style-type: none">• Developed and maintained scalable MERN stack applications, building RESTful APIs, responsive UIs, and database integrations.• Collaborated with cross-functional teams to implement features, debug issues, and optimize performance using Agile practices and Git.• Contributed to real-world, production-level projects under senior guidance, ensuring quality and timely delivery. | |
| Junior Developer, Webnetics (Remote) | 05/2025 – 01/2026
Lahore |
| <ul style="list-style-type: none">• Built scalable, responsive web and mobile applications using React.js, Next.js, JavaScript (ES6+), React Native as part of MERN stack projects.• Integrated RESTful APIs, managed application state, implemented client-side routing, and optimized performance and rendering.• Collaborated with Node.js and Express.js backends, working with MongoDB data and ensuring smooth frontend-backend integration.• Engineered user-friendly mobile applications with React Native, leveraging modern UI frameworks, state management, and API integration for enhanced functionality. | |
| App Developer Intern, Cosmic365 (Remote) | 11/2023 – 01/2024
India |
| <ul style="list-style-type: none">• Assisted in end-to-end mobile application development, including planning, UI design, and implementation.• Developed application features using React Native and JavaScript for cross-platform support.• Collaborated with team members on testing, debugging, and deployment to ensure app quality. | |

SKILLS

Languages: JavaScript

Frontend: React.js, Next.js, React Native

Backend: Node.js, Express.js

Databases: MongoDB, Mongoose

Soft Skills: Project Management, Planning, Teamwork, Client Management

Projects

Business Nexus (Entrepreneur-Investor Collaboration Platform), (In Progress)

Tech Stack: React.js (Vite), Node.js, Express.js, MongoDB (Atlas), JWT Authentication, Socket.IO , WebRTC, Stripe/PayPal, Axios, CSS3, Vercel

Description: Developed a full-stack platform connecting entrepreneurs and investors, enabling collaboration, communication, and secure transactions through a scalable, role-based system.

Achievements:

- Designed and implemented a secure authentication and user management system with JWT, password recovery flows, role-based access control, and dynamic dashboards for investors and entrepreneurs.
- Built core platform features including investor/entrepreneur listings with search & filters, collaboration and deal management workflows, real-time chat using Socket.IO , meeting scheduling with conflict detection, WebRTC-based video calling, document management with file upload.
- Developed and deployed scalable backend services with RESTful APIs, integrated Stripe payment processing, and ensured application security using validation, sanitization, rate limiting, CORS, and 2FA, along with complete API documentation and production deployment on Vercel.

Ecommerce Website

Tech Stack: React.js (Vite), Node.js, Express.js, MongoDB (Atlas), JWT Authentication, Axios, CSS3, Vercel Deployment

Description: Developed a full-stack e-commerce web application using React for the frontend and Node.js/Express for the backend, integrating MongoDB for database management and implementing secure authentication and dynamic API-driven functionality.

Achievements:

- Built a fully responsive e-commerce platform (desktop + mobile) based on a Figma design, using modern React architecture with reusable components and React Router for seamless navigation.
- Developed and integrated RESTful APIs for products, categories, users, orders, and cart management, ensuring efficient data handling and real-time updates across the application.
- Implemented secure JWT-based authentication with protected routes and role-based access control, including a complete admin dashboard with CRUD operations for managing products, users, and orders.
- Designed a dynamic cart system with add/remove functionality, guest cart support using localStorage, and cart merging after user login.
- Optimized application performance and scalability through modular folder structure, efficient state management, and clean backend architecture, delivering a fully deployed production-ready app on Vercel.

Backpackers Hostel Website

Tech Stack: HTML, CSS, JavaScript, PHP, MySQL

Description: Developed a Backpackers Hostel Management Website using HTML, CSS, JavaScript, PHP, and MySQL with role-based authentication for admins and students.

Achievements:

- Built a **multi-page hostel website** (Home, About, Contact, Gallery, etc.) with a responsive UI, providing clear information and easy navigation for users.
- Implemented **role-based login authentication** using PHP and MySQL, allowing secure access for **admin and student portals** with credential control managed by the admin.
- Developed an **admin dashboard** to manage student records, mess details, fee information, and announcements, with real-time visibility of updates on the student portal.

Parallel Matrix Inversion

Tech Stack: HTML, CSS, JavaScript, Python

Description: Built a Parallel Matrix Inversion web application integrating HTML, CSS, JavaScript, and Python to perform matrix inversion using parallel computation techniques.

Achievements:

- Integrated **frontend (HTML, CSS, JavaScript)** with **Python backend** to execute matrix inversion algorithms through a web interface.

- Implemented **Gauss–Jordan and Gaussian Elimination methods**, enabling accurate matrix inversion with parallel execution for improved computation efficiency.
- Designed an enhanced, **user-friendly UI** for matrix input and result visualization, ensuring correct data handling and smooth frontend–backend communication.

Garments Store

Tech Stack: Next.js, Integration with backend using APIs

Description: Developed a Garments Store web application using Next.js, integrating frontend components with backend services through APIs for dynamic data handling.

Achievements:

- Built a **responsive e-commerce interface** with Next.js, implementing modern routing and component-based architecture.
- Integrated **backend APIs** to fetch and display product listings, categories, and details, ensuring smooth data flow and real-time updates.
- Optimized **page performance and user experience** using Next.js features such as server-side rendering and efficient state management.

Garments App

Tech Stack: React Native, Integration with backend using APIs

Description: Developed a Garments Store mobile application using React Native, enabling users to browse clothing items and place orders through seamless backend API integration.

Achievements:

- Built a visually appealing product catalog interface with search and category-based browsing, allowing users to quickly explore clothing items.
- Integrated backend APIs to manage product listings, inventory availability, and order processing, ensuring real-time and accurate data synchronization.
- Implemented form validation and efficient state management for cart and order details, enhancing user experience and minimizing input errors.

Delivery Boy App

Tech Stack: React Native, integration with backend using APIs

Description: Designed a Delivery Boy mobile app using React Native to streamline order handling and status updates for field delivery staff.

Achievements:

- Implemented **task-based delivery flows** allowing riders to view assigned orders, mark pickups, and confirm successful deliveries.
- Connected the app to backend services via **REST APIs** to sync delivery status, order details, and timestamps in real time.
- Focused on **mobile usability for on-field users**, optimizing navigation, touch interactions, and app responsiveness for quick operations.

Pharmacy Store App

Tech Stack: React Native, Integration with backend using APIs

Description: Developed a Pharmacy Store mobile application using React Native, enabling users to browse medicines and place orders through backend API integration.

Achievements:

- Built a **medicine catalog interface** with search and category-based browsing to help users quickly find required products.
- Integrated **backend APIs** to handle medicine listings, availability, and order placement, ensuring accurate and up-to-date data.
- Implemented **form validation and state management** for prescription and order details, improving reliability and reducing user input errors.
